EJ SERVO™ Covers & Grates
Serve You Right

Drive in to any service station and you’ll notice a wide variety of covers and grates necessary to take care of a range of needs around driveways, walkways, retail areas and surrounds. Invariably, they’re all different brands and it’s only because few engineers and construction companies are aware that EJ has all bases covered – covers and grates.

Let’s tip toe into this. Firstly grates, where pedestrians tread warily between fuel pump banks and across slick concrete driveways. Flip through an EJ catalogue and you’ll find HEELPROOF™ ductile iron grates and STORMTROOPER™ channels ideal for pollution control around those pumps, but also product that prevent slips and heel traps.

And more grates - HEELPROOF™ galvanized grates for sump drainage on concrete forecourt areas. Ductile iron trench grates and frames combined with STORMTROOPER™ channels for the driveway crossovers are more from the EJ catalogue for service stations.

For car wash areas, EJ has rolled out galvanized steel grates which easily flush away floods of foamy water. Within the service station shopping precinct, check the impressive inventory of stainless steel floor drains that service fast food areas and bathrooms. Up on the flat roof, everlasting aluminium dome roof drains admirably deal with the downpours, and ductile iron Kerb Adaptors allow for free-flowing drainage to gutters.

But the absolute must for any service station are SERVO™ covers for fuel pits. These are made from a non-conducting, tough-as-nails composite especially for use in any fuel handling or retailing depot.

So EJ covers every need in a service station. When you specify grates and covers, why not make the one brand spec that makes sense – EJ. For more details about EJ SERVO™ products, contact your nearest EJ branch or call 07 3216 5000.

EJ is the one brand that can serve all your grates and cover needs.
