

# They're a Boon Not a Boom. EJ Safe & Secure SERVO™ Covers

Revolution in service station access covers from EJ.

The many issues associated with service station access covers in use over fuel pits make for complex reading but at EJ, we have the perfect solution: the SERVO™.

Being made from a composite material, it is non-conductive of static electricity which dramatically reduces the risk of accidental spark-activated fire. The composite is also non-reactive to fuel spills – petrol or diesel.

These amazing covers are in use around the world and have been installed in Australia in new Puma and 7/11 service stations in Western Australia and also on the Sunshine Coast, Queensland.

SERVO™ has been third party tested to Class D 210kN AS3996 rating and water resistance, so it can take the heavy, constant traffic that classically flows through a servo in any weather conditions.

For added safety and security, the SERVO™ comes with its own locking device. A supplied key unlocks the cover and being made from a light composite material, opening SERVO™ couldn't be simpler.

Made in the USA at the EJ composites factory in Michigan, SERVO™ is stocked locally at EJ facilities in Brisbane, Sydney, Melbourne and Perth. For more information or to place an order, please contact your nearest EJ team or call 07 3216 5000.
