

EJ Takes Flight In Singapore Trade Exhibition

Airport hardware from EJ on show at Airport South East Asia Exhibition, Singapore.

February 2017 and Singapore played host to engineers and airport executives from around the world attending the Airport South East Asia Exhibition. EJ being present was significant since it had recently supplied innovative infrastructure solutions for Singapore's Changi International Airport.

EJ showcased its in-demand Hinged Hatch, large metre wide trench grate and frame designed specifically for busy airport use in its informative display suite which was manned by product experts from global EJ locations including France, Spain and Australia.

The Expo was an opportunity to share experiences and knowledge about various products with existing and potential clients. EJ was even invited to visit another airport to examine existing infrastructure and to provide recommendations for their replacement with EJ solutions.

For more information about solutions that are designed and manufactured for airports specifically, please contact your nearest EJ branch or call 07 3216 5000.
