

# EJ, the Heavy-Weights in Aussie Light Rail Access Covers & Grates

Sydney CBD Light Rail is progressing at high speed.

It's no accident that EJ has quickly taken on the leader's mantle when it comes to access covers and grates for light rail infrastructure construction. Two showcase projects have specifiers across Australia taking note.

With the Gold Coast Commonwealth Games on the horizon, the Gold Coast City Council has now completed their major light rail services, linking Railway Stations from Robina in the south to Helensvale in the North of the Gold Coast to provide a seamless service from the Coast to Brisbane.

EJ access covers and grates feature heavily along the hundreds of kilometers of tracks and stations. With this knowledge and experience behind them, EJ was more than qualified to take on the Sydney CBD Light Rail project.

Electrical network covers throughout the entire project were EJ specified. The choice made by the contractors was a wise one: quality, heavy duty, easy access covers and of course, ERMATIC™ covers from EJ ticked all of these boxes.

The spec was for paver infill 3-part covers and frames (Class D) with a deep pan to allow the standard Sydney Greystone pavers to slot into the cover with a minimum of stone masonry expense. The ERMATIC™ covers were cast in the Picardie Foundry in France and assembled to the desired 3-part configuration prior to shipping direct into Sydney.

The specification of ERMATIC™ covers was probably no surprise to an engineer or construction company who are aware of them. The ease with which these covers can be installed and later accessed for servicing work makes it a no brainer to specify. And the EJ team will always make projects of this nature a breeze for those who need advice on best product solutions.

For more information about the ultimate electrical cover, ERMATIC™ by EJ, contact your nearest branch or call 07 3216 5000.
